Tools You'll Need

Servicing Your Tap

We recommend servicing your tap at least once every year to prolong its life. To see a video showing how to remove the cartridge for servicing, scan the QR code with your smart phone or tablet.

Alternatively visit www.bristan.com/howto

Prior to Installation

All products manufactured and supplied by Bristan are safe provided they are installed, used correctly and recieve regular maintenance in accordance with these instructions.

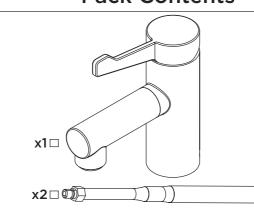

These taps need to be installed in accordance with, and meet the requirements of the Water Supply (Water Fittings) Regulations 1999 and Scottish Byelaws 2004.

Isolation valves must be fitted to the inlet water supplies to ensure ease of future maintenance (not supplied).

Before installing these taps the water supply must be thoroughly flushed in order to remove any swarf, solder etc.

This product must not be modified in any way as this will invalidate the guarantee.

Installation

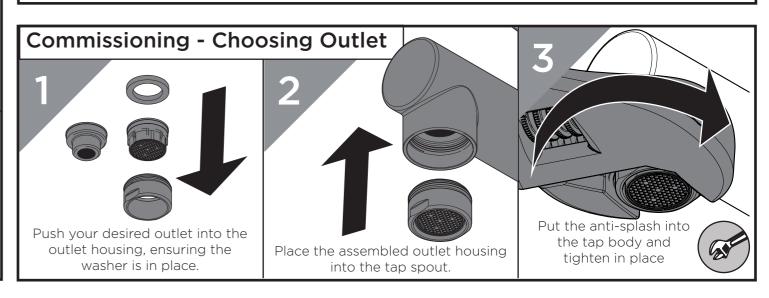

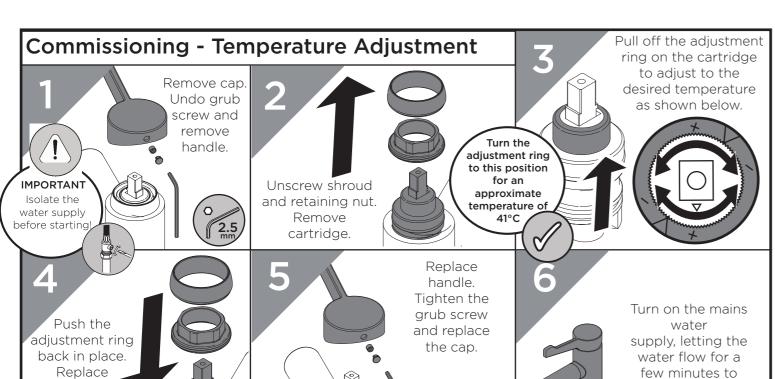

General Cleaning

Your fitting has a high quality finish and should be treated with care to preserve the visible surfaces.

All surfaces will wear if not cleaned correctly, the only safe way to clean your mixer tap is to wipe with a soft damp cloth. Stains can be removed using washing up liquid. All bath cleaning powders and liquids will damage the surface of your fitting, even the non-scratch cleaners.

Note: Never use abrasive detergents or disinfectants or those containing alcohol, hydrochloric acid or phosphoric acid.

Trouble	shooting		
Symptom	Cause(s)		Remedy
No flow or low flow rate	Partially closed isolation v	alve.	Open isolation valve.
	Instantaneous water heater cycles on and off as flow rate or pressure is too low.		Increase water flow rate or pressure through system.
	Head of water is below the	e minimum distance required.	Refer to the specification for the minimum distance required
	Hot or cold water being drawn off elsewhere causing pressure changes or instantaneous boiler temperature changes.		Do not use other water outlets when using the taps.
	Airlock or partial blockage in the supply pipework.		Flush through pipework to ensure removal of debris and any airlocks.
	Water supply failure, please check below:		
	When handle is in Hot Position	fault on the hot water supply. Cold water supply will still continue to run	
	When handle is in Mixed position	fault on either hot and/or cold water supply. Tap will not run in this position due to inability to mix water	Investigate water supply. Check your plumbing and heating systems for any faults.
	When handle is in Cold position	fault on the cold water supply. Hot water will still continue to run.	
Water dripping from taps	This is normal for a short t	ime after using the taps.	This is caused by capillary action, the build up of water in the tap body.
	If water continues to drip, possibly due to the ceramic disc valves/cartridge		Refer to the section: Maintenance - Cleaning/Replacing Cartridge
Taps do not turn on	Closed isolation valve.		Open isolation valve.
	Mains water supply turned off.		Turn on mains water supply.
